

INTELLIGENCE AT THE EDGE PRESENTS IoT GATEWAYS WITH THE OPPORTUNITY TO THRIVE

Hey Enterprises and VARs!

Gateways are tying up THINGS together making them essential elements of the IoT ecosystem. They aggregate data from and secure communications to devices via array of its interfaces while sending data downstream for further processing and actions. However, despite its great virtues, IoT gateways are missing critical mass of intelligence at the edge delivering quick-n-easy device onboarding, data curation and instant analysis, especially in the data intensive industrial environment.

Jumpstart YOUR IoT Journey

Designed for Performance and Agility at Scale!

Vixtera IIoT Edge patented software radically improves IoT gateways capabilities at the edge while equipping users with critically important features, solutions and actions. It allows ubiquitous connectivity and complete control of devices whereas helping to derive relevant data, close to action, granularly, in pre-defined way, providing ability to supply structured data for variety of analysis.

The Edge accurately pinpoints a problem in real time, using it to deliver reliable source for AI/ML modeling, thus, driving consistently-good quality data for predictive applications and services.

Vixtera is developing IIoT edge software and delivering integrated solutions for industrial mission-critical applications.
